No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Detecting the presence or amount of conductin, at protein or nucleic acid levels, is used to diagnose tumours, while agents that (re)activate conductin are used for tumour therapy. Conductin binds to beta-catenin and induces its cytoplasmic degradation, resulting in blockade of the Wnt/Wingless signalling pathway in vertebrates. Conductin also binds to Adenomatous Polyposis Coli (APC) fragments and, in conjunction with APC, acts as a tumour suppressor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 11;

Nucleic acids encoding mutant and wild type Axin and coligonucleotides derived from them are useful for detecting mutations in the Axin gene and for determining whether a subject is clikely to develop cancer (including breast, colorectal, castrointestinal, esophageal, carcinomas or melanomas). The wild cype Axin and homologues of Axin are useful for treating subjects who are likely to develop cancer (thyroid carcinomas). The nucleic acids are also useful for diagnosing cancer and for detecting mutations in cancerous cells. Wild type Axin, its antisense molecule and identified compounds form pharmaceutical compositions in the treatment of cancer. The compositions are also useful for treating cancer by inhibiting tumorigenesis (by inducing degradation of beta-catenin). The nucleic acid encoding Axin, acts through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Detecting the presence or amount of conductin, at protein or nucleic acid levels, is used to diagnose tumours, while agents that (re)activate conductin are used for tumour therapy. Conductin binds to beta-catenin and induces its cytoplasmic degradation, resulting in blockade of the Wntr.Wingless signalling pathway in vertebrates. Conductin also binds to Adenomatous Polyposis Coli (APC) fragments and, in conjunction with APC, acts as a tumour suppressor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                    who are likely to develop cancer (thyroid carcinomas). The nucleic acids are also useful for diagnosing cancer and for detecting mutations in cancerous cells. Wild type Axin, its antisense molecule and identified compounds form pharmaceutical compositions in the treatment of cancer. The compositions are also useful for treating cancer by inhibiting tumorigenesis (by inducing degradation of beta-catenin). The nucleic acid encoding Axin acts through negative regulation of the Wnt pathway in the Nieuwkoop Center.
                                                                                                                                                                                                            nutations in the Axin year and the present colorectal, likely to develop cancer (including breast, colorectal, gastrointestinal, esophageal, carcinomas or melanomas). The wild type Axin and homologues of Axin are useful for treating subjects type Axin and homologues of Axin are useful for treating subjects type Axin and homologues of Axin are useful for treating subjects.
                                                                                                                                                                                                                                                                         Nucleic acids encoding mutant and wild type Axin and oligonucleotides derived from them are useful for detecting mutations in the Axin gene and for determining whether a subject is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gastrointestinal cancer; esophageal cancer; carcinoma; melanoma;

                                             condered arrangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification).

(I), and related enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as components of signal transduction pathways, precursors of steroid hormones and bile acids, as photoreceptors and as co-factor side chains. Some synthases with little or no catalytic activity (and nucleic acids encoding them) are used as controls in the analysis of products formed by enzymatic synthesis; as nutrient supplements; for affinity purification of isoprenoids; or to develop immunological reagents or nucleic acids for monitoring expression of terpene synthase or inheritance of the gene in plant breeding programs. The new synthases was produce novel terpene products. A38910 to A38938 and y90831 to

                                                                                                                                          The present sequence is the Pol protein from the simian immunodeficiency virus found in the red capped mangabey and designated SIVrcm. This virus is related to the HIV viruses that cause AIDS in humans. Knowing the sequence of the Pol protein and its gene is useful as it enables screening for the virus to take place in humans and animals (there is a possibility that this virus undergoes cross-species transmission), allows vaccines to be produced and aids research into the origin of these viruses. This latter is important if an AIDS vaccine is to be found.

(Rurstaki strain EG2371. Proteases have been implicated in the decline of insecticidal activity of crystal proteins in B.t. bioinsecticides. Genetic disablement of the npr and apr genes, by deletion of specific sequences, has allowed the prodn. of B.t. constructs having reduced proteolytic activity and therefore useful for enhanced prodn. of B.t. toxin protein. The B.t. toxins recovered from these B.t. constructs exhibit improved stability with respect to insecticidal activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disabled Bacillus thuringiensis apr and npr genes - encoding neutral and alkaline protease incapable of degrading insecticidal toxic protein (ITP), therefore increasing ITP prodn. and stability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 1996-455371/45.

T-kininogen I precursor - rat
N.Alternate names: 73K protein; LMW kinin
N.Contains: bradykinin; T-kinin
C.Species: Rattus norvegicus (Norway rat)
C;Date: 17-Mar-1987 #sequence_revision 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Status: preliminary; nucleic acid sequence not shown A;Molecule type: mRNA A;Residues: 1-1238 <KUR>

"Cooperative roles of Bozozok/Dharma and Nodal-related protei
formation of the dorsal organizer in zebrafish.";

L Mech. Dev. 91:293-303(2000).

C -!- FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN RE
BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF
C CATENIN AND APC BY GSK-3B (BY SIMILARITY).

C -!- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

C -!- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

C -PDM: PROBABLY PHOSPHORYLATED BY GSK-3B AND DEPHOSPHORYLAT

PODA (BY SIMILARITY).

C -!- SIMILARITY: CONTAINS 1 DIX DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CONFLICT
